Information according to RoHS directive 2011/65/EU & 2015/863

To whom it may concern,

We can confirm that, as a matter of course, Kabeltec GmbH will comply with all obligations under the RoHS directive.

Coming into force of the RoHS directive 2011/65/EU, cables have the obligations as electrical- and electronic equipment (EEE). For implementation of the new obligations, cables are granted a transition period until 22 July 2019. (Art. 2 (2))

All cables we deliver do already comply with the 6 substance restrictions in RoHS. CE marking and further labelling obligations will be implemented within the transition period.

Please note, that cables, that are not compliant with the requirements of the directive, are allowed for sale until the end of the transition period. We will inform you accordingly as soon as we have fully implemented the obligations.

As a matter of course we fulfil all requirements in the position of importer and distributor regarding cables from other manufacturers.

Best Regards,

kabeltec
